Subject: RE: PAH RPF SOT poster draft

Hi Peter,

Thanks very much for these comments! Did Heather and Julie contribute to what you shared, or is it possible they might respond separately?

Thank you all!
Margaret

Margaret:

Two comments:

1. Under the Evaluation Exercise section, you might want to change "Analytical data for all available PAHs in each evaluated whole mixture (including benzo[a]pyrene) will be extracted from the selected studies and used to calculate benzo[a]pyrene equivalent concentrations" to: "Compositional data from studies of animals exposed to mixtures of PAHs will be extracted and used to calculate benzo[a]pyrene concentrations"
2. The meaning of the last sentence in the summary is unclear, "More data is urgently needed for a quantitative assessment." Are you calling for more studies comparing the cancer potencies of individual PAHs? What is the "quantitative assessment" to which you refer? Quantitative assessment of the RPF approach, quantitative assessment of PAH mixtures, or something else?

Thanks for the opportunity to review,
Peter

Notice: This message originated outside of SRC.

Dear all,

Attached is a draft of the poster for the 2016 SOT Annual Meeting in New Orleans along with the abstract (not included on draft poster) that was accepted. Your comments and suggestions by the middle of next week are very much appreciated.

Thanks!!

Margaret
